### GENERATE THREE ADDRESS CODES

## AIM:

To generate three address code using C program.

#### **ALGORITHM:**

- Get address code sequence.□
- Determine current location of 3 using address (for 1st operand). □
- If the current location does not already exist, generate move (B, O).□
- Update address of A (for 2nd operand). □
- If the current value of B and () is null, exist. □
- If they generate operator () A, 3 ADPR.□
- Store the move instruction in memory. □

#### PROGRAM:

```
#include<stdio.h>
#include<string.h>
#include<stdlib.h>
void pm(); void
plus(); void divi();
int i,ch,j,l,addr=100;
char ex[10], exp0[10], exp1[10], exp22[10], id1[5], op[5], id2[5];
char *strrev(char *str){ char *p1, *p2;
   if (! str || ! *str)
       return str;
   for (p1 = str, p2 = str + strlen(str) - 1; p2 > p1; ++p1, --p2)
       *p1 ^= *p2;
       *p2 ^= *p1;
       *p1 ^= *p2;
    } return
